

MACLENNAN WATERPROOF SEALING TAPES

MACLENNAN WATERSEAL TAPE

MacLennan Waterseal Tape is used to form a seal at the overlap of adjacent sheets of MacLennan membranes. The tape is laced between the flange of one sheet and the top flat surface of the next, or if the studs interlock, it can be used to seal between the flat contact area of this type of joint.

SIZE (WxL): 30mm x 22.5m

MACLENNAN WATERSEAL ROPE

MacLennan Waterseal Rope is used to form a seal at the overlap of adjacent sheets of MacLennan membranes when neither a flange joint of stud into stud joint has been made. A bead of Waterseal Rope is used for the sealing of penetrations through the MacLennan membranes.

Waterseal Rope is also used to create a sealing ring to the base of the MacLennan Nuseal Plug.

SIZE (WxL): 10mm x 4.75m

MACLENNAN OVERTAPE

MacLennan Overtape is used to create single sided taped joints as an overtape to seal adjacent butted and overlapped membranes, or to seal above joints to the membrane created whilst shaping the membrane to fit convoluted substrate.

MacLennan Overtape can also be used for the sealing of protrusions through the membrane.

SIZE (WxL): 100mm (A8)/150mm (A7 & A9) x 22m
